

Process Architecture Sprint

This three-day sprint will ensure your company has a clear process architecture that provides a visual model and definition of the scope and structure of your high-level business processes.

This sprint facilitates an analysis of your current and future process architecture that will align your processes with strategy and identify and prioritise business process improvement to achieve operational excellence.

Time: Three Days

Fee: R30,000 excluding VAT including the full set of documented deliverables.

Sprint Deliverables

- A documented process architecture in indented list format using the Process Classification Framework approach showing process groups, processes and sub-processes
- A defined current state business process architecture model using the Business Model and Notation (BPMN) standard
- Identification of strategically important business processes in the process architecture model
- A focused set of improvements and changes to the current state business architecture based on define criteria
- A proposed future state business architecture showing core, management and support processes and their related operating procedures
- A prioritised list of the processes that will form the basis for you process mapping, improvement and standardization initiatives

Sprint Benefits

- An easy-to-read business process architecture that gives an end-to-end view of the processes in your business
- The process architecture will ensure your business processes supports your strategy
- The process architecture will provide a clear view of the interrelationships between the processes and sub-processes
- Each process and sub-process in the architecture will be named and have a defined scope
- The architecture will identify core, management and support processes
- Priorities will be assigned to each process in the architecture
- The current state architecture will establish a baseline for process mapping and the development of standard operating procedures
